

- Agent systems

Why is lunch booked again?

A new request makes a planning assistant overwrite your protected lunch break.

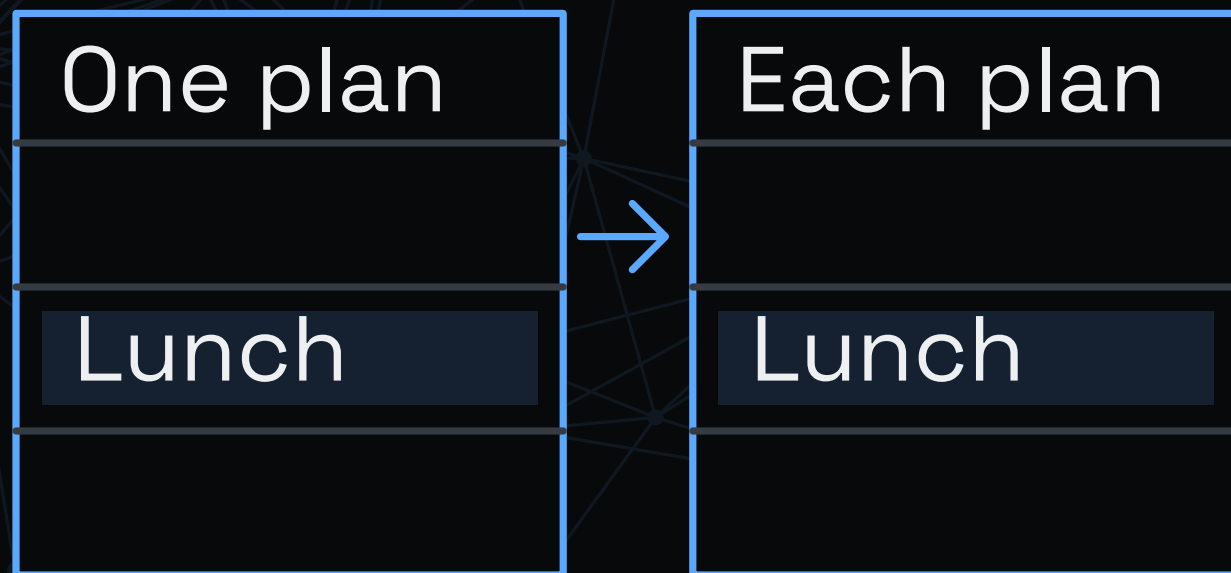

A hypothetical calendar example.

- Agent systems

The edit has two meanings.

Moving a meeting changes today's plan.
Protecting lunch changes how future plans should be made.

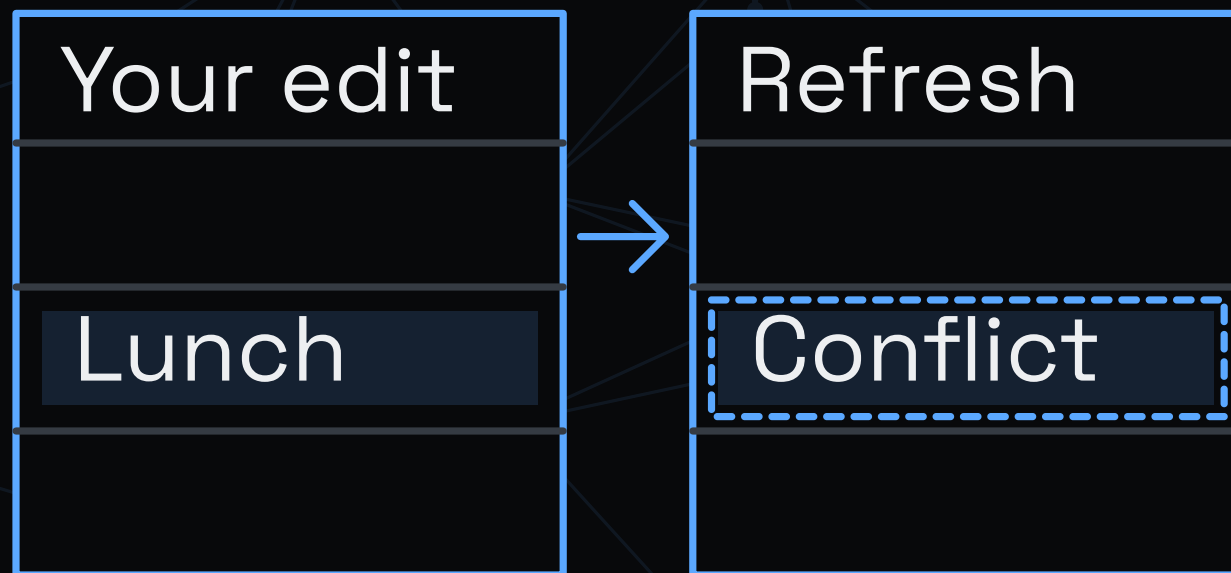

A design choice: what should persist?

- Agent systems

A new request creates a conflict.

The assistant needs to show that a requested time overlaps your protected break.

A suggestion can remain a suggestion.

- Agent systems

Keep the choice with the person.

Offer another time, or ask whether this meeting is an exception. Keep lunch protected until that decision changes.

Move the meeting.

Allow this exception.

Proposed behavior; not a user-study result.

- Agent systems

A correction should survive the refresh.

Human-AI interaction guidelines address correction, learning from behavior and control over changes.

Amershi et al.

Guidelines for Human-AI Interaction

CHI 2019

Keep the decision visible and revisable.
