

- System design

A dragon blocks the bridge.

In an imagined village, a blocked route delays the flour delivery.

A small world-design exercise.

- System design

The flour doesn't arrive.

The bridge belongs to the transport rules.
Blocking it changes the baker's afternoon.

The obstruction has a consequence.

- System design

Now there is a reason to act.

The baker can ask for help. The player can negotiate with the dragon or look for another route.

The scene creates a choice.

- System design

Trace the rule to the experience.

MDA connects mechanics, dynamics and aesthetics: rules, behavior during play, and the player's experience.

Rules	The bridge can be blocked.
--------------	----------------------------

Behavior	The delivery takes longer.
-----------------	----------------------------

Experience	The player sees a consequence.
-------------------	--------------------------------

Hunicke, LeBlanc & Zubek · MDA · 2004

- System design

Let the choice change the plan.

A longer route can deliver the flour later.
Negotiating access can reopen the
crossing.

Possible rules for this invented scene.

- System design

Give the dialogue something to describe.

Characters can respond to the delay or the reopened route. Whether those choices are enjoyable still needs playtesting.

MDA: A Formal Approach to Game Design and Game Research
