

- Agent systems

How should the AI help here?

Pick the interaction before polishing the answer.

The person can change the mode.

- Agent systems

Offer a suggestion.

A person is assembling a plan.

Show a useful next step beside their work,
with an easy dismissal.

Good fit: a suggestion can help without
moving the work on its own.

The person can change the mode.

- Agent systems

Work on the object together.

The software proposes a revision. The person pins what must stay.

Good fit: the person is discovering their preferences by editing.

The person can change the mode.

- Agent systems

Delegate a bounded task.

The person specifies the result and scope, then leaves it to run.

Good fit: the desired result is clear and the person wants to spend attention elsewhere.

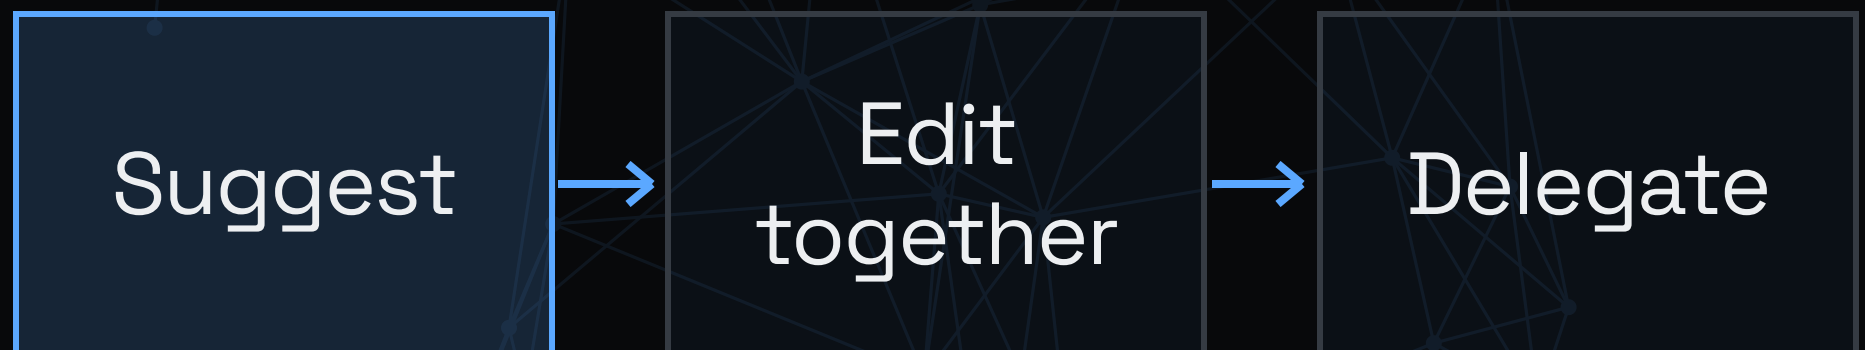

The person can change the mode.

- Agent systems

Allow the mode to change.

Start with delegation. Return to shared editing when a tradeoff appears.

A mode is a choice for this task, not a permanent personality setting.

The person can change the mode.

- Agent systems

Worked contract: preparing a meeting

Useful moment: the person opens the meeting plan.

Software may: propose an agenda from the stated purpose.

Person keeps: final topics and invitations.

Take over: edit the agenda directly.

Try the same contract for your product.

- Agent systems

The question to prototype:

Can a person shape the help without explaining the whole task again?

Design proposal inspired by mixed-initiative HCI.

Source: Horvitz, CHI 1999. The framework does not validate this interface.

The person can change the mode.
