

- Bio-inspired systems

How a swarm chooses a home.

Exploring possible nests must eventually become moving together. What helps trigger that transition?

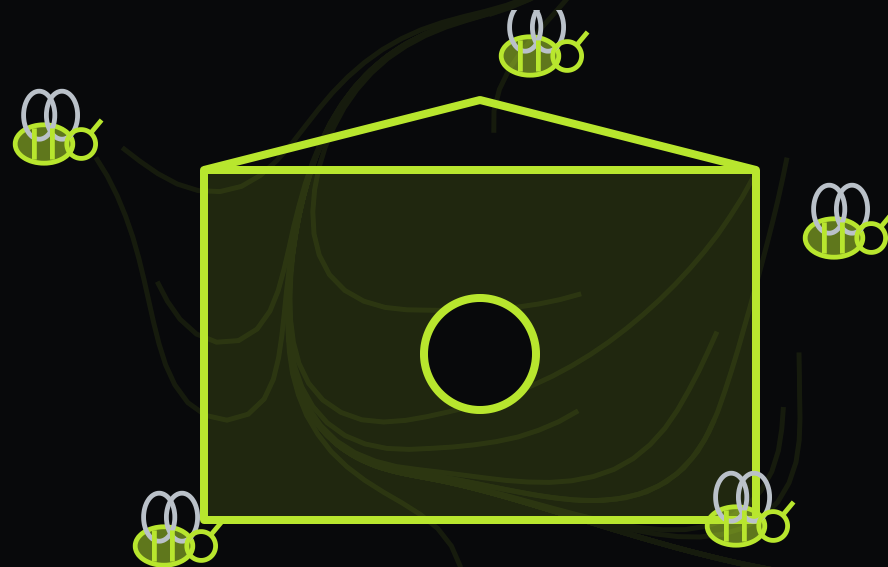

Honeybee nest-site selection.

- Bio-inspired systems

One candidate. Scouts gathered together.

A local gathering at a candidate nest gives scouts information about readiness to move.

Conceptual drawing, not trial counts.

- Bio-inspired systems

Spread the scouts among several cavities.

Seeley and Visscher offered identical boxes close together. Departure preparations were delayed when scouts were dispersed.

Four swarms · paired trials · 2004

- Bio-inspired systems

Exploring and committing.

For an agent team, gathering possibilities and deciding to proceed can be designed as distinct activities.

A design connection, not measured transfer.

- Bio-inspired systems

A contribution
should change something.

The interesting question is what another
observation enables the collective to do next.
