

- Bio-inspired systems

Keep more than the winner.

The lightest picnic shelter, the roomiest and the quickest to put up can be useful on different days.

A proposed comparison of alternatives.

- Bio-inspired systems

One ranking can hide useful differences.

A shelter that loses on carrying weight may still be the one you want when it rains.

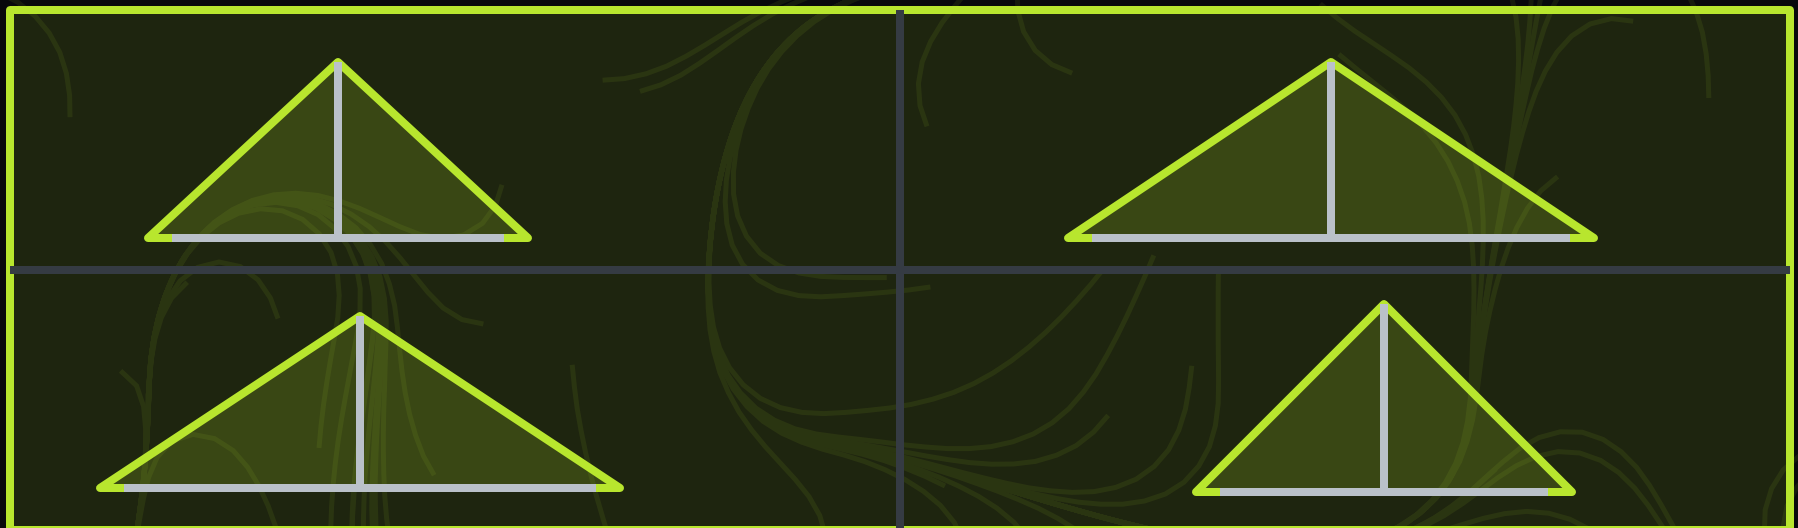

The circumstances change the choice.

- Bio-inspired systems

Keep strong options in different regions.

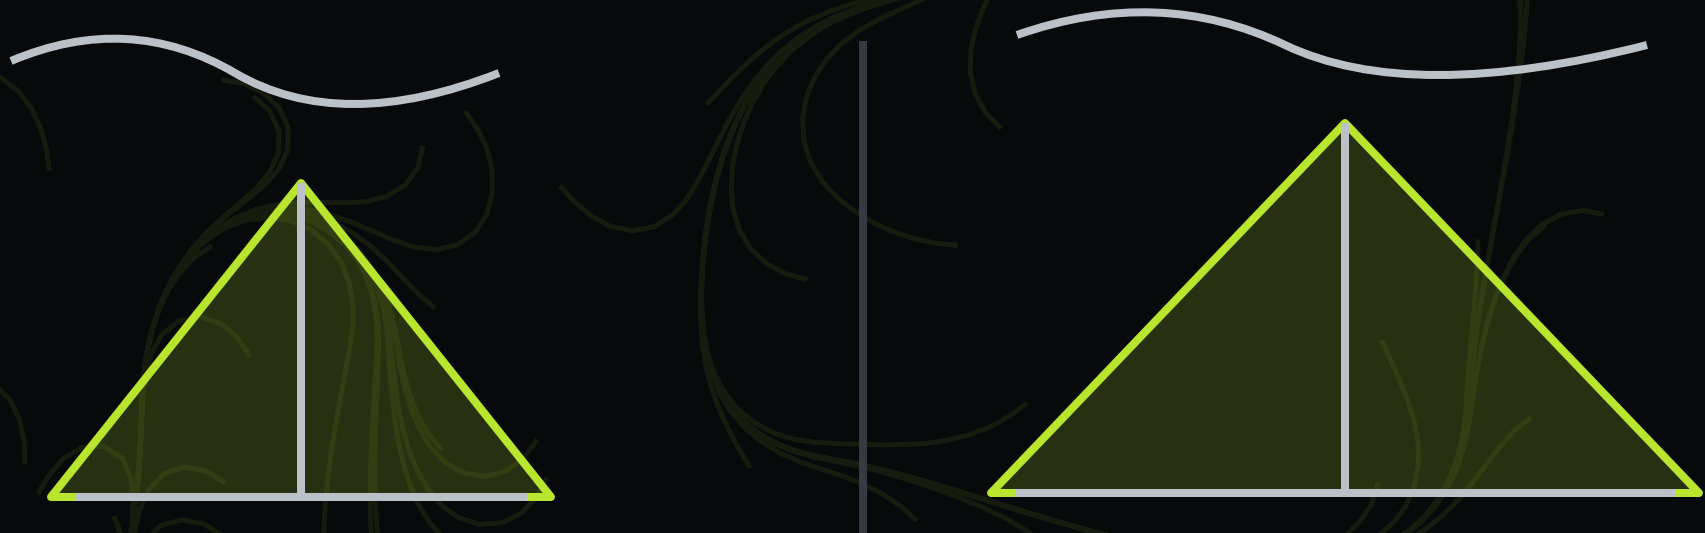

MAP-Elites organizes candidates across chosen features, preserving a repertoire rather than only one overall winner.

- Bio-inspired systems

The map is a choice, too.

Weight and covered space reveal some differences. If wind resistance matters, it needs attention as well.

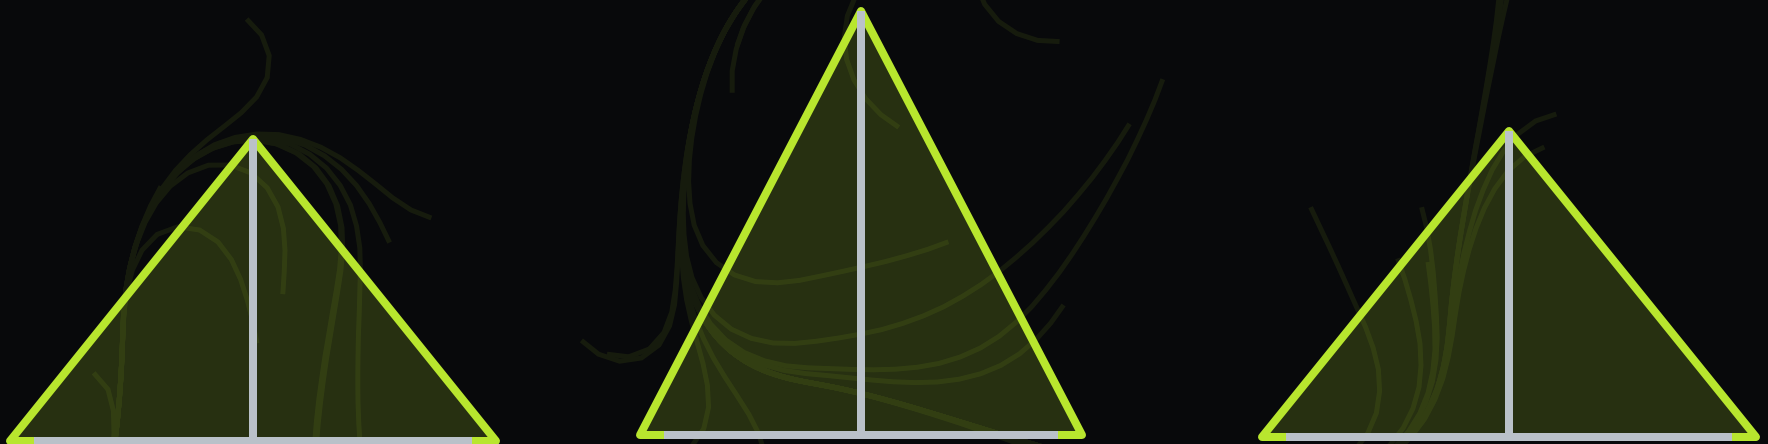

Conceptual feature map, not test data.

- Bio-inspired systems

Give adaptation somewhere to turn.

A repertoire keeps different useful possibilities available when circumstances change. It does not guarantee a good choice.

Diversity is useful relative to a purpose.
